

the 1990s, the number of people with a university degree has increased in all countries, but the increase has been most dramatic in the Netherlands.

As a result of the increase in the number of people with a university degree, the average educational level of the population has risen. This is shown in Figure 1.

Figure 1 shows that the average educational level of the population has risen in all countries, but the increase has been most dramatic in the Netherlands. The average educational level of the population in the Netherlands has risen from 1.5 in 1980 to 2.5 in 1995.

The increase in the average educational level of the population has led to a decrease in the number of people with a low educational level. This is shown in Figure 2.

Figure 2 shows that the number of people with a low educational level has decreased in all countries, but the decrease has been most dramatic in the Netherlands. The number of people with a low educational level in the Netherlands has decreased from 1.5 million in 1980 to 0.5 million in 1995.

The decrease in the number of people with a low educational level has led to a decrease in the number of people with a low educational level. This is shown in Figure 3.

Figure 3 shows that the number of people with a low educational level has decreased in all countries, but the decrease has been most dramatic in the Netherlands. The number of people with a low educational level in the Netherlands has decreased from 1.5 million in 1980 to 0.5 million in 1995.

The decrease in the number of people with a low educational level has led to a decrease in the number of people with a low educational level. This is shown in Figure 4.

Figure 4 shows that the number of people with a low educational level has decreased in all countries, but the decrease has been most dramatic in the Netherlands. The number of people with a low educational level in the Netherlands has decreased from 1.5 million in 1980 to 0.5 million in 1995.

The decrease in the number of people with a low educational level has led to a decrease in the number of people with a low educational level. This is shown in Figure 5.

Figure 5 shows that the number of people with a low educational level has decreased in all countries, but the decrease has been most dramatic in the Netherlands. The number of people with a low educational level in the Netherlands has decreased from 1.5 million in 1980 to 0.5 million in 1995.

The decrease in the number of people with a low educational level has led to a decrease in the number of people with a low educational level. This is shown in Figure 6.

Figure 6 shows that the number of people with a low educational level has decreased in all countries, but the decrease has been most dramatic in the Netherlands. The number of people with a low educational level in the Netherlands has decreased from 1.5 million in 1980 to 0.5 million in 1995.

The decrease in the number of people with a low educational level has led to a decrease in the number of people with a low educational level. This is shown in Figure 7.

Figure 7 shows that the number of people with a low educational level has decreased in all countries, but the decrease has been most dramatic in the Netherlands. The number of people with a low educational level in the Netherlands has decreased from 1.5 million in 1980 to 0.5 million in 1995.

The decrease in the number of people with a low educational level has led to a decrease in the number of people with a low educational level. This is shown in Figure 8.

Figure 8 shows that the number of people with a low educational level has decreased in all countries, but the decrease has been most dramatic in the Netherlands. The number of people with a low educational level in the Netherlands has decreased from 1.5 million in 1980 to 0.5 million in 1995.
